About

Design Technologist with 15+ years at the intersection of design and engineering, specializing in emerging technologies. I've introduced and scaled new technologies within organizations by creating, building, and launching forward-looking product concepts. I've driven impact across industries - from media (NBCUniversal) and advertising (Ogilvy) to technology (Apple and Amazon) - through a combination of fluency in rapidly evolving technologies and a relentless commitment to user-centered design. My work has consistently seeded larger organizational initiatives and long-term transformation, and [one of my projects](#) lives in the permanent collection at the Henry Ford Museum of American Innovation.

With several years of full-stack development experience (from PHP/MySQL to modern NoSQL stacks), I bring a broad technical foundation that complements my expertise with ML and AI tools. Most recently at Amazon I transitioned seamlessly across UX and Engineering teams. Paired with lead-level UX design experience, I not only create strong UX and product visions but also deliver them end-to-end. Above all, I care deeply about getting things right.

Recent Skills

Code: Typescript/Javascript, HTML, CSS, GraphQL

Frameworks: React, React Native, VueJS, Handlebars, AngularJS, [Node.js](#)

AI: Roo Code, Cursor, etc

Other code: PHP, SQL/MySQL, Java, Processing, OpenFrameworks, Arduino

Amazon/AWS: EC2, S3, Comprehend, Dynamo, Amplify, Lambda, API Gateway, etc

3D: Fusion 360, 3D printing

Physical: Arduino and ESP microcontrollers, various SOCs, PCB design

Design tools: Figma, Adobe Photoshop/Illustrator, Sketch, Design Systems

Research: Usability Testing, User Interviews

Prototyping: Figma, vibe coding tools, HTML/CSS/JavaScript

Recent Experience

Amazon / Design Technologist II

NOVEMBER 2020 - MARCH 2024, REMOTE

I joined Ogilvy to build the agency's first Creative Technology team. As a Served on two teams, first as Design Technologist on a large design team driving UX innovation and internal tooling, then as a front-end engineer delivering production applications. Demonstrated flexibility and breadth by moving between user-centered design, emerging technology prototyping, accessibility expertise, and large-scale engineering delivery.

UX & Emerging Technology (first 2 years)

- Led a cross-functional team of UX Designers, UX Researchers, and UX Writers to redesign Amazon's internal customer service chatbot, improving

engagement and raising customer satisfaction to 4.65/5 while reducing reliance on live help.

- Introduced scalable UX vision validated through rapid research and leadership presentations, later incorporating my bespoke CSAT component into the org's design system
- Developed and deployed ML-powered text classification models via Amazon Comprehend (90%+ accuracy) to evaluate UX writing quality (e.g., conciseness). Trained UX Writers to independently build and deploy their own models. Deployed these models in Figma plugins and internal web apps.
- Concepted, designed, and developed a Figma plugin that generated React code directly from design system components, improving accessibility compliance and handoff. The tool's adoption led to the creation of a dedicated product team.
- Designed a dashboard to track and measure accessibility across Amazon products, influencing org-wide accessibility initiatives.

Front-End Engineering (final 18 months)

- Led front-end development for an employee-facing hybrid web and native mobile platform enabling employees to join and engage with internal Affinity Groups.
- Delivered production-ready code in React Native, React, and TypeScript, leveraging GraphQL APIs, i18n, unit testing (Jest), and CI/CD pipelines with Cypress integration tests.
- Ensured accessibility and responsiveness across platforms, directly supporting global employee engagement.

Apple / Senior Front End Developer (Contract)

2018 - NOVEMBER 2020, SUNNYVALE, CA

Working on the Apple.com Product Launch team, I worked very closely with the design team to develop top level pages on <https://apple.com> for products including MacBook Pro, iPhone, etc.

We developed bespoke, pixel-perfect web experiences using Handlebars for templating, a robust in-house SASS library, web components built in vanilla JavaScript with animations powered by an in-house keyframe animation library like Greensock.

Smart Design / Design Technologist (Contract)

2017 - 2018, NYC

I worked with a cross-functional team to design and architect an in-car, multi-screen touch experience with custom hardware controls for the Chinese luxury market that we tested and deployed in Shanghai, China.

I owned the entire technical aspect end-to-end to develop a suite of React Native apps connected in realtime to a socket.io server running on a local WiFi network.

Ogilvy & Mather / Creative Technologist

2014 - 2016, NYC

I joined Ogilvy to build the agency's first Creative Technology team. As a small group of designers and technologists, we brainstormed, pitched, and delivered physical and screen-based products and concepts for clients such as IBM, Jagermeister, Nespresso, and Coke Zero.

✨ AI callouts

- I worked very closely with the IBM creative team to help them understand

the Watson text classification APIs to build a strong concept for the [IBM Cognitive Dress](#), understanding garbage in/garbage out, and the overall scope of the tools as they related to powering ML-based wearable tech.

- I created an early Alexa application for a Nespresso pitch that added voice control to a Nespresso coffee machine that I hacked. This also led to a job offer in Amazon's device design group that I unfortunately to turn down due to a sudden personal issue.

Miner Labs / UX Lead & Full-Stack Engineering

2013 - 2014, NYC

I led UX for the startup's mobile location-based e-commerce product. I designed the full end-to-end user experience and created the mockups that directly led to the company closing its seed round. I also scoped the development of its flagship mobile app. Additional hands-on full-stack engineering on the geo-fencing system, customer-facing app and CMS.

Emerging Media @ NBCUniversal / Product Technologist (Contract)

2010 - 2013, NYC

As a part of the emerging media products team while managing our mobile video delivery platform, I managed our mobile video streaming solution, ushering in new technology such as HLS. Later I started a R&D group working with technologies such as mobile web, Kinect, audio content recognition, set-top-box, SMS-to-TV, and early ML applications that I designed, developed and launched.

✨ AI callouts

- In 2012 using ML image classification and facial recognition, I created (concept, UX, full-stack development) a celebrity lookalike widget that matched a user's Facebook friends with NBC stars and deployed this within NBC's second screen mobile experience.

Freelance Hardware/Software Design & Engineering

2009 - 2025

Designed custom hardware experiences for clients including Gapminder Foundation. My [design concept](#) and prototype for Gapminder led to a 7-figure grant from the Gates Foundation for the non-profit.

Education

Masters

ITP, Tisch School of the Arts at NYU

Focus on product and interaction design <https://itp.nyu.edu/itp/>

Computer Science at Pace University, New York, NY

1 year completed before transferring to NYU

Bachelors

Union College, Schenectady, NY
